Seller Guide: Warranty Registration

NEOPLATRON INDIA PVT LTD

Read this before registering any warranty. Every warranty must be registered by the authorised seller who installed the kit. Fill in **every field** and upload **every required image correctly**. Incomplete or unclear registrations can lead to delays, a rejected warranty or a refused claim.

ONLY E-WARRANTY IS VALID: Only warranties registered online at **www.neoplatron.in/warranty** are valid. This applies from **1 November 2026**. A warranty that is not registered online on this page is not valid.

IMPORTANT NOTE: The warranty must be registered and handed to the customer **on the same day of installation, and only after the installation is fully completed.** Do not register a warranty before the installation is finished, and do not delay it to another day.

WARNING: wrong or repeated images. Uploading a wrong, unrelated, edited or blurred image, or using the **same image** for different views or for more than one vehicle or kit, is treated as **false registration**. This will face **serious action, including suspension or termination of your Seller Code, dealership, franchise or distributorship**.

1. WHO CAN REGISTER AND WHEN

- Only authorised dealers, franchises and installers with a valid **8-digit Seller Code** can register a warranty. The form will not continue without a verified code.
- The registration must be filled in by you, the authorised seller, and not by the customer. **Keep your Seller Code private.** Do not give it to customers or anyone else. It does not appear on the warranty card.
- Register on the **day of installation**, after the installation is complete. The installation date can only be **today or one of the previous 2 days**.
- The invoice date must be **within 2 days of the installation date** and cannot be a future date.

2. THE FOUR STEPS OF THE FORM

Step	What you must fill in
1. Verify Seller	Enter your 8-digit Seller Code and verify it. Check that your garage name shows correctly.
2. Customer Information	Customer name, phone, email, full address, city, state and 6-digit PIN code. The warranty card is sent **automatically to the customer's email**, so enter the correct email and **recheck it** before you continue.
3. Installation	Installation date, invoice number, invoice date, **Installed By (Technician/Mechanic) name**, product type, kit serial number, invoice upload and the 6 mandatory installation photos.
4. Details	**Vehicles:** vehicle company, vehicle model, vehicle type, vehicle number, fuel type, kilometers driven, odometer photo, present mileage photo and average fuel economy. **Generators:** generator model and type.

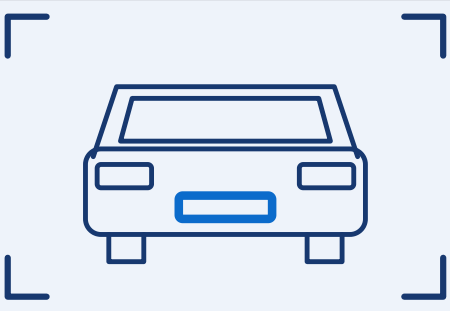

How to Take Each Photo

TAKE OR ATTACH THE EXACT PHOTO SHOWN IN EACH SAMPLE

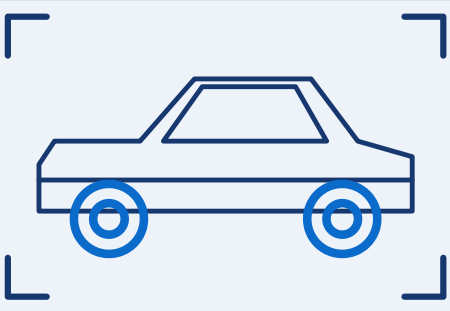

Take or attach a photo that matches the sample exactly: the same angle, the same framing and the highlighted parts (blue) clearly visible. Every photo must be a **different, real photo of this vehicle and this kit**, taken after the installation is complete (except photo 8, taken before installing).

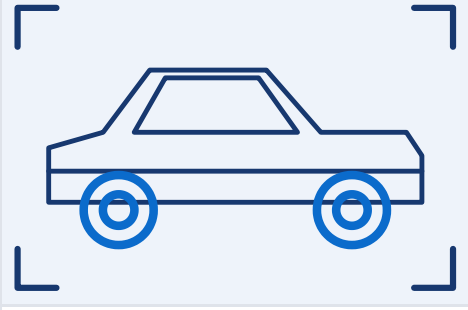

1. Front View
Whole front of the vehicle. Number plate (blue) clearly readable.

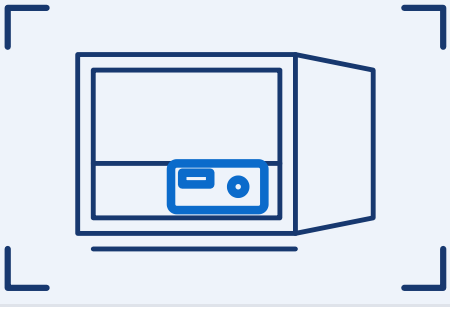

2. Rear View (Closed)
Boot closed. Whole rear and number plate (blue) readable.

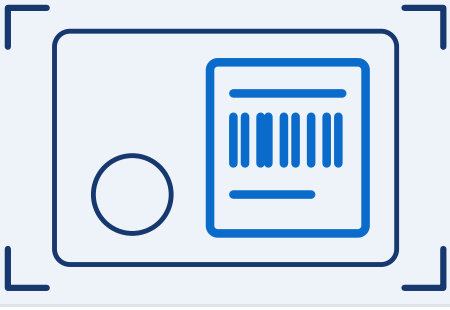

3. Left Side View
Complete left side. Both wheels (blue) inside the frame.

4. Right Side View
Complete right side. Both wheels (blue) inside the frame.

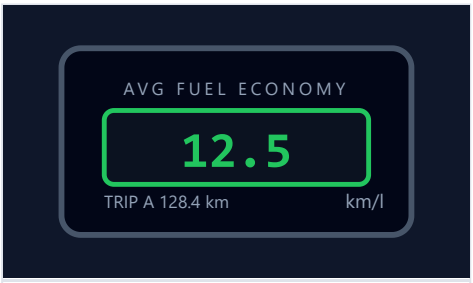

5. Rear Open with Kit
Boot or rear door open. Installed kit (blue) clearly visible.

6. Kit Serial Label
Close-up of the kit ID sticker. Every character readable.

7. Kilometers Driven (vehicles)
Odometer with total kilometers readable.

8. Present Mileage (before installing)
Display showing average mileage / fuel economy.

For generators, the same six photos apply: front with the control panel visible, rear, left side, right side, the generator with the installed kit, and the kit serial label. Photos 7 and 8 are for vehicles only. You can add up to **5 extra photos** (optional).

WARNING: wrong or repeated images. Uploading a wrong, unrelated, edited or blurred image, or using the **same image** for different views or for more than one vehicle or kit, is treated as **false registration**. This will face **serious action, including suspension or termination of your Seller Code, dealership, franchise or distributorship**.

3. FIELDS THAT ARE OFTEN WRONG

- **Kit serial number:** copy it exactly as printed on the kit label, for example SV5G-GI-19. Do not guess.
- **Vehicle number:** enter the full registration number, for example TS09AB1234. The customer can later check the warranty with this number.
- **Vehicle company and model:** enter them separately, for example Toyota and Fortuner.
- **Product type:** choose the correct vehicle category (2/3 wheeler, 4 wheeler below or above 1800cc, 6 wheeler, truck or bus, or diesel generator).
- **Kilometers driven:** the odometer reading at the time of installation, as shown in the odometer photo.

4. VEHICLE MILEAGE PHOTOS (VEHICLES ONLY)

- **Kilometers Driven Photo:** a clear photo of the odometer showing the total kilometers, like sample 7. All digits must be readable.
- **Present Mileage Photo (Before Installing):** a photo of the vehicle's present mileage display, like sample 8, taken **before** the kit is installed.
- **If the vehicle does not show average mileage,** tick "Vehicle doesn't show average mileage". The odometer photo is then used instead, so make sure it is clear.
- **Average Fuel Economy (km/l):** always enter the vehicle's average mileage before installing, for example 12.5.

5. DOCUMENTS

- **Invoice (mandatory):** PDF, JPG or PNG. The full invoice must be readable, including the invoice number, date and kit details.
- **Vehicle RC (optional):** PDF, JPG or PNG.

Do

- Take photos in good daylight or bright light.
- Hold the phone steady and keep the whole subject in frame.
- Make sure the number plate and kit label text are sharp.
- Match each sample's angle and framing.
- Keep each file **5 MB or smaller**.
- Use real photos of this vehicle and this kit.

Don't

- Don't upload blurry, dark, cropped or edited photos.
- Don't reuse photos from another vehicle or kit.
- Don't upload the same photo for different views.
- Don't upload screenshots instead of photos.
- Don't skip a photo to save time. Next will not continue.
- Don't register before the installation is complete.

File limits: each photo and each document must be **5 MB or less**. Photos must be images (JPG, PNG or HEIC). If a file is too big or the wrong type, a red message appears with the file name. Choose a smaller or correct file and try again.

WARNING: wrong or repeated images. Uploading a wrong, unrelated, edited or blurred image, or using the **same image** for different views or for more than one vehicle or kit, is treated as **false registration**. This will face **serious action, including suspension or termination of your Seller Code, dealership, franchise or distributorship**.

After Registration and Checklist

FOR SELLERS

ONLY E-WARRANTY IS VALID: Only warranties registered online at **www.neoplatron.in/warranty** are valid. This applies from **1 November 2026**. A warranty that is not registered online on this page is not valid.

IMPORTANT NOTE: The warranty must be registered and handed to the customer **on the same day of installation, and only after the installation is fully completed.** Do not register a warranty before the installation is finished, and do not delay it to another day.

6. SUBMITTING

- Tap **Submit Registration** and **wait**. Uploading the files can take a minute or more. The button shows progress such as "Uploading files (3 of 10)". **Do not close or refresh the page** until the success screen appears.
- On success you get the **Warranty UID**. Save it and give it to the customer.
- If the success screen lists files that could not be uploaded, contact Neoplatron with the Warranty UID so they can be sent.

7. AFTER YOU REGISTER

- The warranty card is **sent automatically to the customer's email.** Make sure you entered the **correct customer email** and recheck it before you submit. A wrong email means the customer will not receive the card.
- Also tap **Download Warranty Card** on the success screen and **send the card to the customer on WhatsApp** the same day.
- The customer can also **check or download the warranty card** at any time at **www.neoplatron.in/warranty** by entering the **Warranty UID or vehicle number**.
- The warranty is valid for **1 year or 20,000 km** from the installation date, whichever is earlier, subject to the Warranty Terms & Conditions.

8. MONEY BACK GUARANTEE: WHAT TO TELL CUSTOMERS

- The guarantee covers a minimum mileage improvement of **30-40% in the city** and **50% on the highway**. Customers can get up to 90%.
- A refund is considered only after the kit has been used for at least **10 days or 2,000 km**, and only after Neoplatron's mileage test.
- The test is the standard reserve-to-reserve SOP: fill 5 litres at the reserve light, reset Trip A, drive until the reserve light comes on again and note the distance. It is repeated **3 times in the city and 3 times on the highway**.
- This is why the **before-installation mileage photo and average fuel economy** must be recorded correctly at registration. Missing or wrong records can affect a claim.
- Full terms are on the Money Back Policy page at www.neoplatron.in.

9. FINAL CHECKLIST BEFORE YOU TAP SUBMIT

☐ Installation is fully completed today	☐ Seller Code verified
☐ Customer details correct and email rechecked	☐ Installation date is today or within the last 2 days
☐ Invoice date within 2 days of installation	☐ Invoice number filled in and invoice uploaded
☐ Technician/mechanic name filled in	☐ Kit serial number copied from the label
☐ All 6 photos match the samples and are all different	☐ Vehicle company, model, number and type entered
☐ Odometer and present mileage photos uploaded	☐ Average fuel economy entered
☐ Customer has ticked the terms confirmation	☐ Registered online at neoplatron.in/warranty
☐ Warranty card downloaded and sent on WhatsApp	☐ Customer told they can check or download it at neoplatron.in/warranty
